

SULPHAJECT

Injectable Solution

Composition :

Each ml contains:

Sulphadimidine Sodium 300 mg

Description :

Sulphadimidine is a sulphonamide with antimicrobial activity against Gram-positive bacteria (like Staphelococcus, Streptococcus and pneumococcus), and against some Gram-negative bacteria (like Pasteurella, E. coli, Salmonella) and against some Rickettsiae and protozoa.

Sulphadimidine is rapidly absorbed from the site of application and slowly excreted by the organism, so in most animals a single daily dose is sufficient.

Indications :

Pneumonia, foot rot, diptheria, actinobacillosis, colibacillosis, salmonellosis, pasteurellosis, enteritis, polyarthritis, mastitis, dysentery, and septicemia in horses, cattle, sheep, dogs and cats.

Contraindications:

- Hypersensitivity to Sulphanomides .
- Animals with renal or liver failure .

Side effects :

Hypersensitivity reaction , hemorrhagic enteritis (in cattle), kidney damage, or crystalluria.

Precautions :

The prolonged treatment of sulfanomides may causes damage for the intestinal microflora .
